Client Requirements

Overview:

Client have a existing webapp on react and django. He shared the Figma and He want us to develop 2 pages from scratch and 1 need to revamp other are already done or not needed by the client. After developing the frontend he will provide us with the API documentation so we can integrate backend with frontend. His project currently only allows users from our Wordpress site to access it. He want to transfer this existing system to allow users from all platforms.

Pages Need To Develop From Scratch:

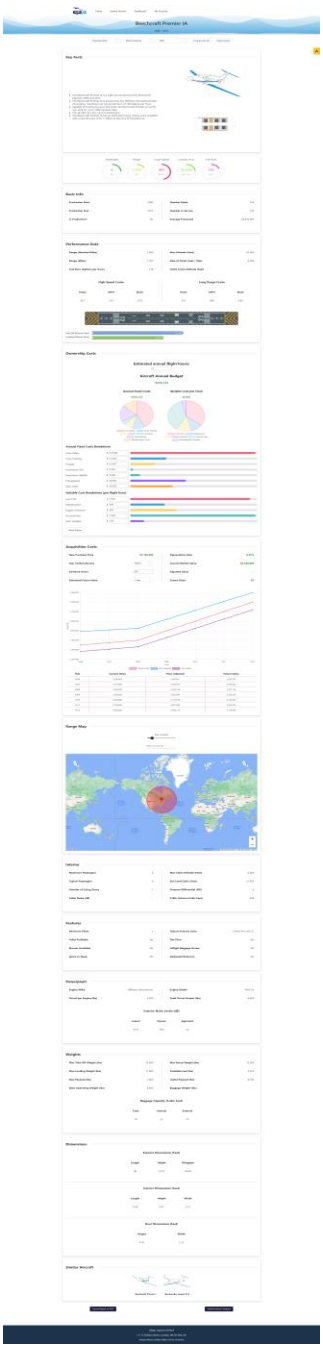

Need to develop industry overview and aircraft lookup page from scratch:

Page Need to Revamp:

This page is already exist in current application but the design is different from the figma so client want us to revamp and make it exactly similar to figma. Existing page URL (https://premium.compareprivateplanes.com/Beechcraft-Premier-IA)

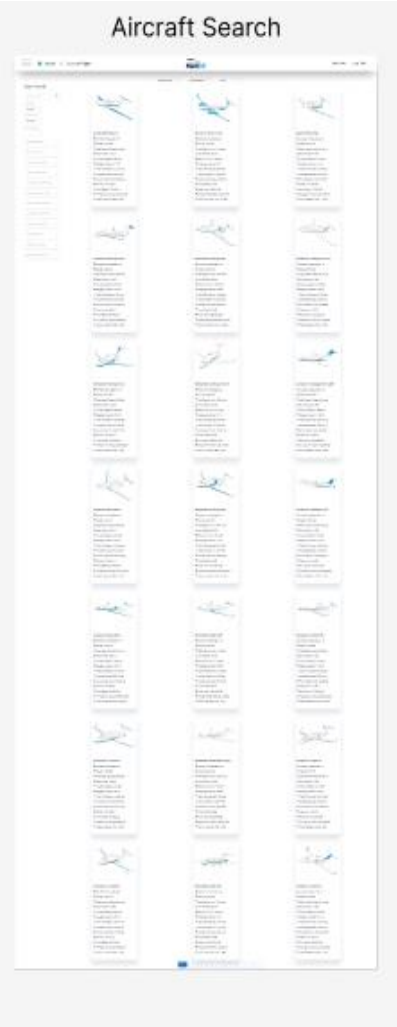

(Existing Page)

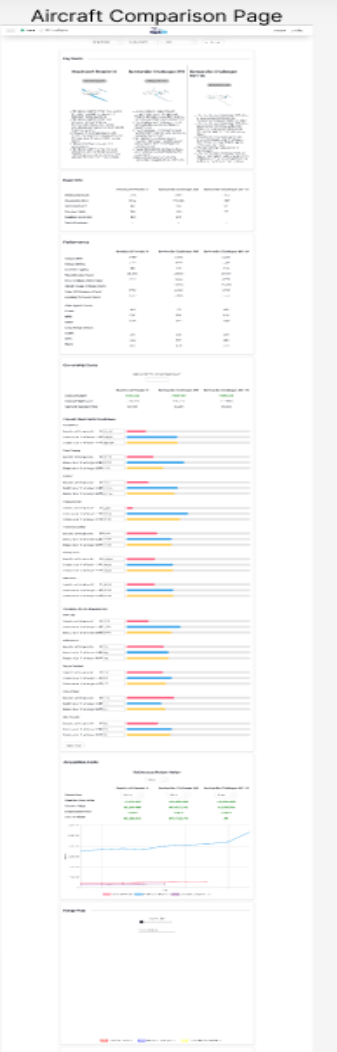

(Figma Design)

Pages That are already created:

AirCraft search and comparision page are already built and exist the application we don't need to do any changes in them. URL of the existing pages: (https://premium.compareprivateplanes.com/, (https://premium.compareprivateplanes.com/compare)

Pages Which client Do not want:

Client don’t want this page so no need to develop it.

Current Application link: https://premium.compareprivateplanes.com/

Username: test_user
Password: test_password1!
